

Future-proofed AC and heating solutions

Landmark milestones in a company's history are definitely something to be celebrated but, on reaching its 20th anniversary this year, Core Air Conditioning has marked the occasion by looking to the future.

Austin McDermott,
Managing Director

Antoinette McDermott, Financial Controller

"Yes we are immensely proud of our achievements to date", says Managing Director Austin McDermott, "but the significance of our success is the strong platform it gives us to strengthen still further the scope and quality of the engineering-led solutions we deliver to the building services sector.

"To that end we have added experienced personnel to our sales, technical and engineering teams while, at the same time, further improving our management structures and technical support systems. The result is a re-energised operation perfectly poised to meet the current and future needs of our ever-expanding customer base."

Established in 1996, Core Air Conditioning has always "partnered" with market-leading brands (see panel) to ensure that it offers engineering-led solutions based on innovative, technology-driven products that are performance-driven, energy-efficient, and eco-friendly. Regulatory compliance in relation to all relevant national and international standards is also assured.

The diversity and scope of the portfolio is an added advantage. All brands and product ranges represented complement one another so every eventuality is catered for. No matter what the project application, Core can devise a tailored solution, in conjunction with the specifying consultant and client, to match specific requirements.

All services provided are delivered in a professional, structured manner. Core Air Conditioning delivers these in a flexible and friendly manner. Its ability to adapt and make changes, especially when unforeseen circumstances arise, is well known.
